

Use Case allocations

Stock Investment Tool — Use Case Team Allocation

Version: 1.0
Date: 2026-05-28
Reference: Use Case Specification v3.0

Team Overview

Member	Role Summary	UC Count
Aryan	AI model engineer — owns all financial data, AI logic, and data-facing features	8
Matthew	Less technical — owns the heavier share of the shared non-AI feature set	3
Neelaansh	Same level as Matthew — lighter feature load due to documentation, design, and misc project work	2

Each use case is allocated to exactly one member. Where features touch each other (e.g., Aryan's AI model powering Neelaansh's Watchlist), the owning member is responsible for the user-facing layer; Aryan is responsible for the underlying data contract.

Aryan — AI Engineer

Scope: All features that directly query, process, or present financial data via the AI model. Owns the chatbot module in full, the screener logic, news data pipeline, charts, and the long-term behavioural learning system.

UC	Module	Use Case	Complexity
UC-001	Chatbot	Stock Analysis (ANALYSIS OPTION)	High
UC-002	Chatbot	Competitor Analysis (COMPETITOR OPTION)	High
UC-003	Chatbot	Undervalued Stock Discovery (UNDERVALUED OPTION)	High
UC-004	Chatbot	Conviction Score (CONVICTION SCORE OPTION)	High
UC-005	Screener	Stock Screener	High
UC-006	Watchlist	Watchlist Management	Medium
UC-007	News	News & Alerts Page	Medium
UC-008	Charts	Charts & Technical View	Medium
UC-009	System	Behavioural Learning & Adaptation	High

Notes

- UC-001 is the highest-priority item in the entire project — the AI model data contract defined here unlocks every other use case across all three members.
- UC-003 (Undervalued) has the highest external data dependency: media attention and retail discussion signals likely require a separate data pipeline beyond the core AI model. Flag early if out of scope.
- UC-013 can be started last; it needs real user interaction data to be meaningful.

Matthew — Non-Technical (Primary)

Scope: Owns the heavier portion of the shared non-AI feature set. Responsible for the notification system (the most complex item in this group), the full profile and preferences page, and session management.

UC	Module	Use Case	Complexity
UC-010	Notifications	Notification System (Configure & Receive)	High

Notes

- UC-008 is the most complex item in this member's allocation — six trigger types, three delivery channels (WhatsApp, Telegram, Email), retry/fallback logic, and cooldown rules. WhatsApp Business API verification (Meta) should be started immediately; it takes 2–4 weeks to approve.
 - UC-010 and UC-011 can be built in parallel. UC-010 must be complete before UC-011 is testable end-to-end.
 - UC-011 includes the image upload pipeline for custom backgrounds and buttons — coordinate with Neelaansh on the UI design spec before implementation.
-

Neelaansh — Non-Technical (Supporting)

Scope: Lighter feature allocation due to ownership of all documentation, design work, and miscellaneous project tasks. Owns user registration and the full watchlist feature.

UC	Module	Use Case	Complexity
UC-011	Auth	Login / Logout	Low
UC-012	Profile	Profile, Investing Style & UI Customisation	Medium
UC-013	Auth	User Registration	Low

Non-UC Responsibilities

- Project documentation (specifications, meeting notes, decision logs)
- UI/UX design (wireframes, component design, design system)

- Design handoff to Members 1 and 2
- Miscellaneous project coordination tasks

Notes

- UC-009 (Registration) should be the first task completed — it unblocks login (UC-010, Matthew) and all downstream development.
 - UC-006 (Watchlist) uses AI-generated stock suggestions and metric-based bulk creation — the AI calls for these flow through Aryan's model. Coordinate with Aryan on the data contract for watchlist population before building the UI layer.
 - Given the split workload, UC-009 can be completed early and UC-006 picked up once documentation and design deliverables allow.
-

Allocation Summary

UC	Use Case	Member	Complexity
UC-001	Chatbot: Stock Analysis	Aryan	High
UC-002	Chatbot: Competitor Analysis	Aryan	High
UC-003	Chatbot: Undervalued Discovery	Aryan	High
UC-004	Chatbot: Conviction Score	Aryan	High
UC-005	Stock Screener	Aryan	High
UC-006	Watchlist Management	Aryan	Medium
UC-007	News & Alerts Page	Aryan	Medium
UC-008	Charts & Technical View	Aryan	Medium
UC-009	Behavioural Learning & Adaptation	Aryan	High
UC-010	Login / Logout	Neelaansh	Low
UC-011	Profile, Style & UI Customisation	Neelaansh	Medium

UC	Use Case	Member	Complexity
UC-012	Notification System	Matthew	High
UC-013	User Registration	Neelaansh	Low
